

MAINTENANCE

- Replacing the battery resets all the computer's parameters to zero.
- Battery life: around 12 months (depending on use).
- Although water resistant, it is strongly inadvisable to use pressurized water on electronic parts.
- Although resistant to solvents and petroleum products, it is inadvisable to use these types of products to clean the various components.
- Advice: use warm water, or soap and water, and dry with a cloth.
- Do not leave the computer in the sun (e.g. behind the windshield of a vehicle) when not in use.
- **Do not dismantle any component; this will make the warranty void.**
- The features, shape and general presentation are subject to change without prior notification.
- Operating temperature range: 0°C to +40°C / 32°F to 104°F.
